Contents of Volume 101

Number 1, September 1986

T. Kijenski, A. Baiker, M. Glinski, P. Dollenmeier, and A. Wokaun. Monolayers and Double Layers of Vanadium Pentoxide on Different Carriers: Preparation, Characterization, and Catalytic Activities 1

Hiroyoshi Kitagawa, Yoko Sendoda, and Yoshio Ono. Transformation of Propane into Aromatic Hydrocarbons over ZSM-5 Zeolites 12

Ben-Zu Wan, Rayford G. Anthony, Guang Zhi Peng, and Abraham Clearfield. Characterization of Organically Pillared Zirconium Phosphates 19

Isaac Jacob, Moshe Fisher, Zeev Hadari, Mordechay Herskowitz, Jaime Wisniak, Noah Shamir, and Moshe H. Mintz. The Leaching-Activation Process of Urushibara Catalysts 28

D. G. Rethwisch and J. A. Dumesic. Adsorptive and Catalytic Properties of Supported Metal Oxides. III. Water-Gas Shift over Supported Iron and Zinc Oxides 35

Moein B. Sayed and Jacques C. Védrine. The Effect of Modification with Boron on the Catalytic Activity and Selectivity of HZSM-5. I. Impregnation with Boric Acid 43

D. Duprez, A. Miloudi, G. Delahay, and R. Maurel. Selective Steam Reforming of Aromatic Hydrocarbons. V. Steam Conversion and Hydroconversion of Selected Monoalkyl- and Dialkylbenzenes on Pt and Ni Catalysts 56

Á. Molnár, G. V. Smith, and M. Bartók. Selective Hydrogenation of Alkynes over Metallic Glasses 67

Francisco Zaera, David Godbey, and G. A. Somorjai. Methylcyclopentane Conversion over Platinum Single Crystal Surfaces: Evidence for the Cyclic Mechanism of *n*-Hexane Isomerization 73

Koh-ichi Segawa, Yasuo Nakajima, Shin-ichi Nakata, Sachio Asaoka, and Hiromitsu Takahashi. ^{31}P-MASNMR Spectroscopic Studies with Zirconium Phosphate Catalysts 81

Nancy B. Jackson and John G. Ekerdt. Methanol Synthesis Mechanism over Zirconium Dioxide 90

Glen Connell and J. A. Dumesic. Acidic Properties of Binary Oxide Catalysts. I. Mössbauer Spectroscopy and Pyridine Adsorption for Iron Supported on Silica 103

Se H. Oh and Joyce E. Carpenter. Role of NO in Inhibiting CO Oxidation over Alumina-Supported Rhodium 114

C. Lee and L. D. Schmidt. Structure Effects in Ethane Hydrogenolysis on Rh/SiO_2 Catalysts 123

Stephen J. DeCanio, Jong Rack Sohn, Paul O. Fritz, and Jack H. Lunsford. Acid Catalysis by Dealuminated Zeolite-Y. I. Methanol Dehydration and Cumene Dealkylation 132

P. K. Tsai and M. B. Maple. Oscillatory Oxidation of H_2 over a Pt Catalyst 142

M. Štolcová, M. Hronec, J. Ilavský, and M. Kabešová. Oxidation of Benzoic Acid to Phenol in the Vapor Phase. I. Mechanistic Aspects 153

D. E. Damiani, E. D. Pérez Millán, and A. J. Rouco. SiO_2-Supported Ru–Cu Catalysts: A TPR Study 162

R. T. K. Baker, J. A. Dumesic, and J. J. Chludzinski, Jr. The Effect of Various Bimetallics on the Graphite–Steam Reaction 169

Hiroshi Miura, Masashi Osawa, Kazuo Sugiyama, and Tsuneo Matsuda. The Adsorption of CO and Hydrogen on Reduced Molybdenum Catalysts Used for CO Hydrogenation 178

L. Vordonis, P. G. Koutsoukos, and A. Lycourghiotis. Development of Carriers with Controlled Concentration of Charged Surface Groups in Aqueous Solutions. II. Modification of γ-Al_2O_3 with Various Amounts of Lithium and Fluoride Ions 186
Masakazu Iwamoto, Masahiro Tajima, and Shuichi Kagawa. Gas-Phase Direct Hydration of Ethylene over Proton-Exchanged Zeolite Catalysts at Atmospheric Pressure 195
D. L. Roberts and G. L. Griffin. On the Role of Specific Hydrogen Adsorption Sites in Methanol Decomposition on Zinc Oxide 201
F. Notheisz, M. Bartók, D. Ostgard, and G. V. Smith. Hydrogenation and Isomerization of (+)-Apopinene over Well-Characterized Pt/SiO_2 and over Pt/Al_2O_3 212

Notes

Author Index for Volume 101 557

The Subject Index for Volume 101 will appear in the December 1986 issue as part of a cumulative index for the year 1986.

INFORMATION FOR AUTHORS

The *Journal of Catalysis* publishes articles dealing with original studies in heterogeneous and homogeneous talysis as well as studies relating catalytic properties with chemical processes at surfaces, studies of chemistry of rfaces, and engineering studies related to catalysis. All articles will be published in English.

Submission of Manuscripts. Manuscripts should be sent by registered mail to either of the Editors:

Professor W. Keith Hall	Professor Frank S. Stone
Chemistry Building	School of Chemistry
University of Pittsburgh	University of Bath
Pittsburgh, Pennsylvania 15260	Bath BA2 7AY, England

Original papers only will be considered. Manuscripts are accepted for review with the understanding that the ne work has not been and will not be published nor is presently submitted elsewhere, and that its submission for blication has been approved by all of the authors and by the institution where the work was carried out; further, at any person cited as a source of personal communications has approved such citation. Written authorization y be required at the Editor's discretion. Articles and any other material published in the *Journal of Catalysis* present the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the blisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the icle, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the blisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of s or her contributions to the journal.

Form of Manuscript. Manuscripts should be concise and consistent in style, spelling, and use of abbreviations. bmit manuscript (in English) in triplicate, including the original typewritten copy, with copies of all figures and bles. All material (including tables, reference lists, etc.) should be typed double-spaced on one side of 8.5 × 11-. white bond paper (with 1-in. margins on all sides). Each page of the manuscript should be numbered. *Page 1* ould contain the article title, authors' names (without degrees), affiliations, a running title (abbreviated form of le) not exceeding 45 letters and spaces, and an address to which proof should be mailed. *Page 2* should contain a ort abstract.

Authors should use descriptive headings in this order: Abstract, Introduction, Methods, Results, Discussion, cknowledgments, and References.

In the Methods section, authors should draw attention to any particular chemical or biological hazards that may involved in carrying out the experiments described. Any relevant safety precautions should be described; if an cepted code of practice has been followed, a reference to the relevant standards should be given.

Notes and *Letters to the Editor* may not exceed 8 double-spaced typewritten manuscript pages (including tables d figures). Accepted Notes will not receive publication priority over articles.

Letters to the Editor will be considered for priority publication under the following conditions: (a) Letters must e related to some statement made in a recently published article in this Journal; (b) in cases of conflicting views on ny topic, no more than one Letter from each author will be accepted.

Units of weights, measures, etc., when used in conjunction with numerals should be abbreviated and unpunctu- ed (e.g., 10%, 50 ml, 3 g, 8 cm).

The SI (Systeme International) system of units will be accepted without editorial change. Authors using other nits are encouraged to define them in terms of SI units once in each publication, e.g., in an article where pressures e quoted in Torr to write "1 Torr = 133.3 N m^{-2}." For information concerning SI units, see *Manual of Symbols nd Terminology for Physicochemical Quantities and Units*, prepared by M. L. McGlashan and published by utterworth, London, 1969.

Footnotes should be avoided if possible; but if essential, they should be designated by superscript Arabic umerals (starting with title) in the text.

Tables should be numbered with Arabic numerals in order of mention in the text. They should be typed double- paced on separate pages. Each table should have a short descriptive caption typed (double-spaced) above the able. Table footnotes (indicated by superscript, lowercase, italic letters) should be typed at the end of the table.

Figures should be numbered with Arabic numerals in order of mention in the text; each figure should have a escriptive legend. Legends should be typed double-spaced together on a separate page. All illustrations should be n finished form suitable for photoreproduction. No figures should exceed 8.5 × 11 in. (21 × 27.5 cm). Drawings hould be made with India ink on tracing linen, good quality tracing paper, smooth surface white paper, or Bristol oard. Graph paper if used should be ruled in blue. Grid lines that are to show in the final reproduction should be nked in black.

Copies of drawings are not acceptable unless they are high contrast glossy prints. All but the very simplest tructures and structural formulas must be designed for direct reproduction. Lettering should be large enough to be egible after a reduction of 50–60%. Illustrations in color can be accepted only if the authors defray the cost.

References to the literature should be cited in the text by italic Arabic numerals in parentheses, set on the text ne, and listed numerically at the end of the paper. Abbreviations of journal titles should follow the style used in *hemical Abstracts Service Source Index,* 1985. Style and punctuation of references should be in accordance with ne following examples:

. McVicker, G. B., Kramer, G. M., and Ziemiak, J. J., *J. Catal.* **83,** 286 (1983).

. Klier, K., *in* "Advances in Catalysis" (D. D. Eley, H. Pines, and P. B. Weisz, Eds.), Vol. 31, p. 243. Academic Press, New York, 1982.

. Pines, H., "The Chemistry of Catalytic Hydrocarbon Conversions." Academic Press, New York, 1981.

Proofs. Proofs will be sent to the author, with a reprint order form. Authors will be charged for alterations in xcess of 10% of the cost of composition.

Reprints. Fifty reprints without covers will be provided free of charge. Additional reprints may be purchased; an rder form will be included with proofs.

We Asked 400 Experts To Define Physical Science.

They Did.

The **Encyclopedia of Physical Science and Technology.**

Matchless in quality and scope, this monumental 15-volume work provides commanding coverage of every major aspect of physical science and technology.

Over 400 original articles—written by eminent authors from education and industry—give clear, current, and comprehensive descriptions of every subject. The articles and their authors have been selected by a world-renowned executive advisory board made up of many of the major figures in the sciences and engineering disciplines, including recipients of the Nobel Prize, the National Medal of Science, and other awards.

This unique source, the first to encompass all aspects of the physical sciences, is a complete technical library. Its vast treatment includes:

- 4.5 million words on 9600 double-column pages
- 5500 illustrations
- 1500 tables
- 4000 glossary entries
- 3300 bibliography entries
- 45,000-entry subject index in Volume 15.

The **Encyclopedia of Physical Science and Technology** will be coming soon. Take advantage of this special pre-publication announcement and *save $400.00.* Plan your purchase now!

For more information, contact Bob Martin at (305) 345-2747, or write to: Academic Press, ATTN: Marketing Department, Orlando, FL 32887-0405 (please include your name, title/position, address, and phone number).
